In today's healthcare environment, it is recognized that a computer workstation is more than just an automation tool and the computer network is now a required utility, similar to electricity and water in a healthcare facility. These mission-critical items serve as the portal used by healthcare professionals to maintain the quality and continuity of patient care while ensuring patient safety.

Advancia Aero's veteran leadership has personally managed HIT / HIM in the federal environment since the early 1990s and has been involved in many of the initiatives being realized today. For example, our management team has led deployments of various iterations of Electronic Healthcare Records (EHR) implementations, transitioned from standalone hospital/clinic centric networks to "one base, one network" to the current Defense Health Agency joint medical network. Our management team members have been involved in both Major Command (MAJCOM) and HQ AF HIT/HIT financial portfolio management. Advancia Aero's management team has developed and instructed Chief Information Officer bootcamps, taught Medical Information Systems (MIS) Newcomers classes at government symposiums and mapped HIT/HIM skills competencies at an enterprise level. In addition, our management team members have served as MAJCOM Chief Technology and Chief Information Officers as well as led HIT/HIM departments at stand-alone clinics, community hospitals as well as led enterprise-wide systems deployment and performed corporate-level HIT/HIM program management.

When you partner with Advancia Aeronautics (Advancia Aero) for your HIT/HIM needs, you are partnering with a company that truly understands the intricacies of HIT/HIM in the federal environment.
